Stuck with Ransomware and can't access your Data?

24/7 Emergency Ransomware Recovery Services

– If you have an emergency,
Our expert here to help

Don't Worry
We Can Retrieve It

Your Personal
Files are Encrypted

How to prevent Ransomware?

Follow this step after ransomware hit.

- Keep your operating system patched and up to date to ensure you have fewer vulnerabilities to exploit.
- Don't install software or give it administrative privileges unless you know exactly what it is and what it does.
- Strengthen your credentials (passwords) using mix of special characters, numbers and letters.
- Install antivirus software, which detects malicious programs like ransomware as they arrive

And, of course, back up your files (Offsite backup), frequently and automatically!

If you disparately need to recover or decrypt your encrypted data and to prevent data damages

Follow this step after ransomware hit.

- Don't modify or rename encrypted files.
- Don't change or remove unique Ransomware ID.
- Don't try to decrypt with third party decryption tool or wrong decryption script on master copy.
